values show: **mean** ±sd (min - max) and are all based on measurements of melanopic EDI (lx)

¹ Histogram limits are set from 00:00 to 24:00

² Metrics are calculated on a by-participant-day basis (n=72) with the exception of IV and IS, which are calculated on a by-participant basis (n=15).

³ Values were log 10 transformed prior to averaging, with an offset of 0.1, and backtransformed afterwards
